## 2. Welcome

### Welcome to the 2015 AMMCS-CAIMS Congress

On behalf of the Organizing, Scientific and Technical Committees of the 2015 AMMCS-CAIMS Congress, we would like to welcome you to this exciting event held from June 7 through 12, 2015 on the Waterloo Campus of the Wilfrid Laurier University, Canada.

The Congress is an international event combining the AMMCS and CAIMS meetings at the same location. The AMMCS Conference Series aims at promoting interdisciplinary research and collaboration involving mathematical, statistical and computational sciences within a larger international community. It focuses on recent advances in Applied Mathematics, Modeling and Computational Science (AMMCS). The Canadian Applied and Industrial Mathematics Society has a growing presence in industrial, mathematical, scientific and technological circles within and outside of Canada. CAIMS is a member society of the International Council for Industrial and Applied Mathematics, which hosts the ICIAM Congresses every four years. The first AMMCS meeting in 2011 was a satellite event of this International Congress held in Vancouver.

The present Congress has a number of embedded events, among which are the 23rd Annual Conference of the Computational Fluid Dynamics Society of Canada, the 2nd Canadian Symposium on Scientific Computing and Numerical Analysis, and others. This year the AMMCS-CAIMS Congress has an exciting scientific program featuring about 40 special and contributed sessions in several parallel tracks, 12 one-hour talks given by distinguished scientists and mathematicians, as well as 5 semi-plenary speakers. The Congress will also feature CAIMS Prize Winners lectures, and a number of student prizes and young researcher awards will be presented, including the AMMCS Kolmogorov-Wiener Prize for Young Researchers.

Each day of the Congress, the scientific program starts with a plenary session that features one of the Congress plenary speakers. The scientific program of the Congress provides a unique opportunity for in-depth technical discussions and exchange of ideas in applied mathematics, computational science and mathematical modeling with their applications in natural and social sciences, engineering and technology, industry and finance. We are proud that this Congress, combining the traditional AMMCS and CAIMS meetings, is held this year on the campus of Wilfrid Laurier University. It is the oldest university in the Cambridge-Kitchener-Waterloo-Guelph area, a beautiful part of Southwestern Ontario located in a comfortable driving distance from some of North Americas major tourist destinations, including the Niagara Escarpment, a UNESCO World Biosphere Reserve, Toronto and Niagara Falls. On behalf of the Organizing, Scientific and Technical Committees, we would like to thank all people involved in this event. In particular we would like to express our sincere thanks to special session and scientific theme organizers, to all the authors who submitted valuable results forming the basis of conference, and to our sponsors.

Thanks to all for your hard work to ensure a dynamic, enjoyable and professionally fulfilling conference. We also hope that you will enjoy this beautiful part of the world and will take home with you an intellectually inspiring and socially satisfying experience.

Jacques Bélair , Roman Makarov, and Roderick Melnik

Congress General Chairs

### 3. Information

#### Hyperlinks

- Other than in this remark,
- blue text signifies hyperlinks within this document
  - magenta text signifies external hyperlinks

#### Wireless Network

Congress delegates have free wireless internet service on the Wilfrid Laurier University campus.

For connection information and to obtain a password  
• please go to the registration desk.

#### Computers

Rooms BA206 and BA207 contain computers that are available for use by Congress delegates.

For login information  
• please go to the registration desk.

#### Parking

Congress delegates may purchase parking passes for \$7 per day.

Passes can be purchased at  
• the registration desk on Monday and Tuesday  
• the parking kiosk located at the main entrance to the campus, off of University Ave., (cash only) from 8:00 to 16:00.

There are also two “Pay and Display” lots, with a cost of \$7 per day.

Pay by cash or credit card at  
• the machine in the lot.

Parking permits allow you to park in the white permit lots only.

Parking is free on weekends and after 16:30 on weekdays.

#### Public Transit

Wilfrid Laurier University is serviced by routes 7, 8, 12, 29, 200, and 201 on University Ave. West and King St. North.

Route maps are available at  
• the registration desk  
• [www.grt.ca](http://www.grt.ca).

## 4. Events

(Campus Maps)

Day	Time	Event	Location	Details
Sunday, June 7	19:00-21:00	Welcoming Reception	Science Courtyard	An informal social get-together, with food and drinks served. A conference registration table will be open.
Sunday, June 7	13:00-18:00	CAIMS Board Meeting	N1001	
Monday, June 8	10:30-12:30	NSERC Discovery Grant Information Session	BA201	
Tuesday, June 9	12:00-13:30	CAIMS Annual General Meeting	BA101	
Tuesday, June 9	18:00-20:00	Industrial Mathematics Networking Event	N1001	One-hour panel discussion, including representatives from NSERC and OCE, followed by a reception. Panel members will share their experiences and discuss programs available for students and faculty members interested in starting their own companies. The event is part of the Industrial Math theme, jointly organized by CAIMS, CRM, and PIMS.
Wednesday, June 10	9:30-10:00	Congress Poster Sessions	BA Halls	Two-day poster sessions over four coffee breaks
Thursday, June 11	14:30-15:00			
Wednesday, June 10	12:00-12:30	Congress Photo Shoot	BA Lobby	Meet in the Bricker Academic building lobby for the Congress photo shoot
Thursday, June 11	19:00-22:00	Congress Banquet Dinner	The Ballroom, <a href="#">Waterloo Inn</a> , 475 King Street North ( <a href="#">Directions</a> )	Banquet tickets will be part of your registration package if you purchased them in advance. Tickets will also be available for purchase at the registration desk until 15:30 on Tuesday, June 9, at a cost of \$70. A bus to the banquet location will be provided for those requiring transportation.
Friday, June 12	15:00-17:00	MS2Discovery Institute Meeting	BA202	
Friday, June 12	18:00-18:15	Congress Prize Announcements	BA201	Announcement and awarding of the Congress Prizes

## 5. Congress Student Prizes and Young Researcher Award

The Congress Prizes will be announced and awarded at the closing of the Congress on Friday, June 12, 18:00-18:15, in BA201.

There are three student prizes, open to undergraduate and graduate students, described in the following table.

AMMCS-CAIMS2015 Prize	Description:
Best Poster	To be eligible, the student must be a co-author of the work presented and a designer of the poster. This competition will include a 10-minute discussion related to the content of the poster with a judging panel.
Best Student Paper in a Special Session	the student must be a co-author of the work and present it during a special session or minisymposium.
Best Student Paper in a Contributed Session	the student must be a co-author of the work and present it during a contributed session.

One additional award is open to young researchers, meaning recent Ph.D. graduates and postdoctoral fellows under the age of 35.

AMMCS-CAIMS2015 Award	Description:
Kolmogorov-Wiener Prize for Young Researchers	To be eligible, the young researcher must <ul style="list-style-type: none"><li>a. have earned their PhD degrees within 5 years of January 1 of the year of the award;</li><li>b. have at least two peer refereed publications, minimum one of which has appeared in an internationally recognized journal;</li><li>c. have presented their talks at an AMMCS event in the year of the award.</li></ul>

## 6. Congress Plenary Lectures

Wednesday, June 10, 13:30-14:30, in Room BA201

**Réka Albert, Pennsylvania State University**

About the speaker: Prof. Reka Albert received her Ph.D. in Physics from the University of Notre Dame (2001), working with Prof. Albert-Laszlo Barabasi. She did postdoctoral research in mathematical biology at the University of Minnesota with Prof. Hans Othmer. Prof. Albert then joined the Pennsylvania State University, where she currently is a Professor of Physics with adjunct appointments in the Department of Biology and the College of Information Science and Technology. Dr. Albert works on predictive modeling of biological regulatory networks at multiple levels of organization. Her pioneering publications on the structural heterogeneities of complex networks had a large impact on the field, reflected in their identification as “Fast breaking paper” and “High impact paper” by Thomson Reuters. Dr. Albert is a fellow of the American Physical Society, where she served as a member-at-large in the Division of Biological Physics. She was a recipient of a Sloan Research Fellowship (2004), an NSF Career Award (2007), and the Maria Goeppert-Mayer award (2011). Her service to the profession includes serving on the editorial board of the journals Physical Review E, The New Journal of Physics, IET Systems Biology, Biophysical Journal, SIAM Journal of Applied Dynamical Systems and Bulletin of Mathematical Biology, on the scientific advisory board of the Mathematical Biosciences Institute at Ohio State, and as a peer reviewer for more than 35 journals.

### ***Graph analysis and discrete dynamic modeling elucidates the outcomes of within-cell networks***

Interaction networks formed by gene products form the basis of cell behavior (growth, survival, apoptosis, movement). Experimental advances in the last decade helped uncover the structure of many molecular-to-cellular level networks, such as protein interaction or metabolic networks. These advances mark the first steps toward a major goal of contemporary biology: to map out, understand and model in quantifiable terms the various networks that control the behavior of the cell. Such an understanding would also allow the development of comprehensive and effective therapeutic strategies.

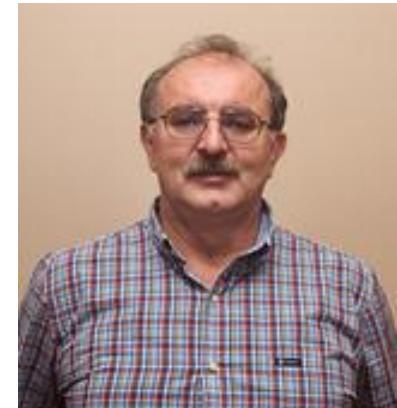

This talk will focus on my group's recent work on discrete dynamic modeling of signal transduction networks in various organisms. These models can be developed from qualitative information yet show a dynamic repertoire that can be directly related to the real system's outcomes. For example, our model of the signaling network inside T cells predicted therapeutic targets for the blood cancer T-LGL leukemia, several of which were validated experimentally. I will then present an enriched network representation that includes the regulatory logic. Extension of existing graph measures and analyses, performed on this expanded network, allows an efficient way to determine the dynamic repertoire of the network and to predict manipulations that can stabilize or, conversely, block, certain outcomes.

# Congress Plenary Lectures

Tuesday, June 9, 13:30-14:30, in Room BA201

**Tomasz Bielecki, Illinois Institute of Technology**

About the speaker: Tomasz Bielecki is a Professor of Applied Mathematics and the Director of the Master of Mathematical Finance program at Illinois Institute of Technology. He received his PhD degree from the Warsaw School of Economics. Prof. Bielecki's fields of expertise include Stochastic Analysis, Mathematical Finance, and Credit Risk Modeling. He is an Associate Editor of six well-known journals in areas of Mathematics and Finance, including Mathematical Finance and International Journal of Theoretical and Applied Finance. Prof. Bielecki is a co-author of three books in the area of Credit Risk Modeling and Financial Mathematics including his most recent book "Counterparty Risk and Funding: A Tale of Two Puzzles" co-authored with Stéphane Crépey and Damiano Brigo.

## *Dependence between components of multivariate conditional Markov chains: Markov consistency and Markov Copulae*

Modeling of evolution of dependence between processes occurring in financial markets is important. Typically, one can identify marginal statistical properties of individual processes, and then one is confronted with the task of modeling dependence between these individual processes so that the marginal properties are obeyed. We have been advocating, for some time now, to address this modeling problem via the theory of Markov consistency and Markov copulae.

In this talk we shall examine the problem of existence and construction of a non-trivial multivariate conditional Markov chain with components that are given conditional Markov chains. In this regard we shall give sufficient and necessary conditions, in terms of relevant conditional expectations, for a component of a multivariate Markov chain to be a Markov chain in the filtration of the entire chain a property called strong Markov consistency, as well as in its own filtration a property called weak Markov consistency. These characterization results are proved via analysis of the semi-martingale structure of the chain.

Several financial applications will be indicated.

# Congress Plenary Lectures

Tuesday, June 9, 8:30-9:30, in Room BA201

**Chris Budd, University of Bath**

About the speaker: I have broad research interests in interdisciplinary industrial and applied mathematics with a particular interest in complex nonlinear problems arising in real applications. Typically these involve the solution (analytically or numerically) of partial differential equations. A large amount of my work for the last ten years has been in numerical weather prediction and data assimilation in close collaboration with the Met Office (which I visit very frequently). My algorithms are now incorporated into the Met Office operational weather forecasting code where they have made a significant difference to their accuracy and received a Knowledge Transfer Award. I am also working on climate modelling using modern mathematical and computational methods and am actively involved in a number of international climate modelling networks, including CliMathNet which I co-direct and the Maths of Planet Earth programme. I also collaborate with the energy industry, the aerospace industry, the telecommunications industry and the food industry. Anywhere that maths can be applied is of interest to me.

## ***Eight great reasons to do maths***

The UK government has identified 8 great technologies which it believes will lead the advancement of science and technology into the future. Mathematics underpins all of these and developments of mathematics will be the engine for future growth in all of them. In this talk I will describe the 8 technologies and look at some of the maths behind them, from Big Data through to Energy.

# Congress Plenary Lectures

Monday, June 8, 14:00-15:00, in Room BA201

**Wing Kam Liu, Northwestern University**

About the speaker: Dr. Wing Kam Liu, Walter P. Murphy Professor of Northwestern University, has made fundamental, innovative contributions to the theory, methodologies, and applications of multiscale simulations towards the understanding and design of nano-materials, polymers science, and multiresolution mechanics. His ISI and Google citations and H factors are (14,200, 60) and (37,750, 88), respectively. In 2014, Liu is selected as a highly cited researcher in Computer Science and a member of the Worlds Most Influential Scientific Minds by Thompson Reuters. Liu developed new exceptional accuracy meshfree methods for simulation of extremely deformation of solids and fluids including additive manufacturing; fractional-order viscoelasticity polymer science; fluid-structure interaction, and applicable to medical imaging. He was the PI of a multi-year multi-million research grant from Goodyear Tire and Rubber Company to develop and integrated design strategy to enable prediction, synthesis and characterization of new polymer nanocomposites to achieve enhanced performance. Liu is current the President of IACM and Chair of USNCTAM; Founding Director of the Summer Institute on Nano Mechanics and Materials; Founding Chair of the ASME NanoEngineering Council; Editors of Computational Mechanics & Int. J. of Applied Mathematics and Mechanics; Honorary Editor of Int. J. of Computational Methods; serve on numerous editorial boards; Consultant to 20+ organizations. Liu has written three books; and he is a Fellow of ASME, ASCE, USACM, AAM, and IACM. Lius selected awards and honors including: 2014 Japan Society for Computational Engineering and Science Grand Prize in recognition of his outstanding contributions in the field of computational mechanics; the Honorary Professorship from Dalian University of Technology in 2013; the 2012 IACM Gauss-Newton Medal; the 2012 ASME Design Automation Conference Best Paper Award; the 2009 ASME Dedicated Service Award, the 2007 ASME Robert Henry Thurston Lecture Award, the 2007 USACM John von Neumann Medal, the 2004 JSME Computational Mechanics Award, the 2002 IACM Computational Mechanics Award, the 2001 USACM Computational Structural Mechanics Award, the 1995 ASME Gustus L. Larson Memorial Award, the 1985 ASME Pi Tau Sigma Gold Medal, the 1979 ASME Melville Medal, the 1989 Thomas J. Jaeger Prize of the ISMIRT, and the 1983 Ralph R. Teetor Educational Award, American Society of Automotive Engineers.

## *Multiscale Modeling of Soft Materials and Related Biological Responses*

Liquids, polymers, gels, foams and a number of biological materials are soft materials, which can be easily deformed by thermal stress or thermal fluctuations. Predominate physical behaviors of these soft materials occur at energy scale comparable with room temperature thermal energy. These behaviors cannot be, or are not easily, to be directly predicted from its atomic or molecular constituents. This is because the soft materials are always self-assemble into mesoscopic structures, which are much larger than the microscopic scale, and yet much smaller than the macroscopic scale of these materials. Especially, the mechanical and physical properties of soft materials originate from the interplay of phenomena at different spatial and temporal scales. As such, it is necessary to adopt multiscale methods when dealing with soft materials in order to account for all important mechanisms. The offerings of this lecture are twofold: (1) establishing a multiscale modeling framework to predict viscoelastic behaviors of polymers through fractional derivatives, (2) rapid computational prototyping and testing of drug carriers in tumor microvasculature through immersed molecular finite element method (IMFEM). In (1), we have incorporated the fractional diffusion of free chains into the integration kernel for the viscoelastic response of polymers and polymer nanocomposites using the Mittag-Leffler function. While conventional models for viscoelastic materials employ a discrete relaxation spectrum, the fractional-order model exhibits a continuous relaxation distribution, which is in accordance with experimental observations. In (2), the IMFEM is used to simulate the whole blood including blood plasma, red blood cells and nanoparticles. We elucidate how the size, shape and stiffness of nanoparticles will affect their dispersions in the microvasculature, with the accurate molecular interactions informed by molecular mean-field theory.

# Congress Plenary Lectures

Monday, June 8, 9:00-10:00, in Room BA201

## Stéphane Mallat, École Normale Supérieure

About the speaker: Stéphane Mallat received the Ph.D. degree in electrical engineering from the University of Pennsylvania, in 1988. He was then Professor at the Courant Institute of Mathematical Sciences. In 1995, he became Professor in Applied Mathematics at École Polytechnique, Paris. From 2001 to 2007 he was co-founder and CEO of a semiconductor start-up company. In 2012 he joined the Computer Science Department of École Normale Supérieure, in Paris.

Stéphane Mallat's research interests include signal processing, computer vision, harmonic analysis and learning. He wrote a "Wavelet tour of signal processing: the sparse way." In 1997, he received the Outstanding Achievement Award from the SPIE Society and was a plenary lecturer at the International Congress of Mathematicians in 1998. He also received the 2004 European IST Grand prize, the 2004 INIST-CNRS prize for most cited French researcher in engineering and computer science, and the CNRS innovation medal in 2014. He was elected at the French Academy of Sciences in 2014.

### ***Learning in High Dimension: from Images to Quantum Chemistry***

Learning from data means approximating functionals in high dimensional spaces. Finding strong sources of regularity is necessary to avoid the curse of dimensionality. Invariance to action of small groups such as rigid displacements is too weak, but stability to action of diffeomorphisms is a much stronger property, satisfied by many physical functionals and most signal and image classification problems. We show that it is sufficient to approximate complex high-dimensional classification and regression functionals.

We introduce scattering operators, which are invariants to low-dimensional Lie groups, and Lipschitz continuous to actions of diffeomorphisms. They are computed with iterated multiscale wavelet transforms. These scattering operators provide a Euclidean embedding of geometric distances and a representation of stationary random processes, which captures intermittency phenomena. Applications will be shown for several image classification problems, and for learning quantum chemistry energy functionals.

# Congress Plenary Lectures

Friday, June 12, 8:30-9:30, in Room BA201

**Kees Oosterlee, Delft University of Technology and CWI**

About the speaker: Prof. Kees Oosterlee (<http://www.cwi.nl/people/2098>, <http://ta.twi.tudelft.nl/mf/users/oosterle/>) works in numerical analysis and scientific computing at the CWI, center for mathematics and computer science, in Amsterdam, the Netherlands, as well as in the Delft University of Technology. His field of expertise is Computational Finance, working at the interface of numerical and financial mathematics. In Oosterlee's group the COS method, pricing financial derivatives efficiently with Fourier cosine expansions, has been developed, which is in use at financial institutions world-wide. Prof. Oosterlee is the Editor-in-Chief of the Journal of Computational Finance. He has organized several international workshops and conferences, and taught Summer Schools abroad (in Spain, Japan, South Africa) on Computational Finance. His 90 journal publications range from multigrid solution methods for fluid flow problems to Monte Carlo methods in finance.

## *On Fourier cosine expansions and wavelets for derivative pricing and risk management in computational finance*

In this talk, we discuss applications of Fourier cosine expansions and wavelets in computational finance. Next to the accurate and efficient valuation of various financial options, we recently generalized the methods towards risk management and the numerical solution of backward stochastic differential equations (BSDEs). Typically Fourier techniques in finance rely on the availability of the asset dynamics' characteristic function (ie. the Fourier transform of the asset's density function). We will discuss a numerical Fourier method for which the characteristic function need not be available. The resulting methods can then also be employed for problems with varying coefficients (local volatility, stochastic local volatility) models), such as for the Stochastic Alpha Beta Rho (SABR) method.

# Congress Plenary Lectures

Friday, June 12, 13:30-14:30, in Room BA201

**Sebastian Schreiber, University of California, Davis**

About the speaker: Sebastian J. Schreiber is a Professor of Ecology and Evolution and member of the Center of Population Biology at the University of California, Davis. Prior to coming to Davis, he was an Associate Professor of Mathematics at the College of William and Mary and Western Washington University. Professor Schreibers research on the development and application of methods in stochastic processes and nonlinear dynamics to ecology, evolution, and epidemiology has been supported by grants from the U.S. National Science Foundation, the U.S. National Oceanic and Atmospheric Administration, the Bureau for Land Management, and the U.S. Fisheries and Wildlife Service. He has authored nearly eighty scientific papers in peer-reviewed mathematics and biology journals. Professor Schreiber is currently on the editorial boards of five research journals including Ecology and the Journal of Mathematical Biology.

## *Species Coexistence in Stochastic Environments: A Mathematical Perspective*

Stochastic fluctuations in temperature, precipitation and a host of other environmental factors occur at multiple spatial and temporal scales. As the survival and reproduction of organisms, whether they be plants, animals, or viruses, depend on these environmental factors, these stochastic fluctuations often drive fluctuations in population abundances. This simple observation leads to a fundamental question in population biology. Namely, under what conditions do stochastic environmental fluctuations hinder or facilitate the maintenance of biodiversity? This question is particularly pressing in light of global climate models predicting increasing temporal variation in many climatic variables over the next century.

One fruitful approach to tackling this question from population biology is the development and analysis of models accounting for nonlinear feedbacks among species, population structure, and environmental stochasticity. In this talk, I will discuss progress in the development of a mathematical theory for stochastic coexistence where the dynamics of the interacting species are encoded by random difference equations and coexistence corresponds to the limit points of empirical measures being bounded away from an extinction set. I will illustrate the theory with empirical based examples involving checkerspot butterflies, Kansas prairies, and coastal dunes.

# Congress Plenary Lectures

Wednesday, June 10, 8:30-9:30, in Room BA201

**Eric Vanden-Eijnden, Courant Institute, New York University**

About the speaker: My main focus is the development of mathematical tools and numerical methods for the analysis of dynamical systems which are both stochastic and multiscale. The particular areas of applications I am interested in include molecular dynamics, chemical and biological networks, materials science, atmosphere-ocean science, and fluids dynamics. My main objectives are to understand the pathways and rate of occurrence of rare events in complex systems; to develop and analyze multiscale algorithms for the simulation of random dynamical systems; and, more generally, to quantify the effects of random perturbations on the systems dynamics.

## *Multiscale Modeling in a Stochastic Setting*

Applications from molecular dynamics, material science, biology, or atmosphere/ocean sciences present new challenges for applied and numerical mathematics. These applications typically involve systems whose dynamics span a very wide range of spatio-temporal scales, and are subject to random perturbations of thermal or other origin. This second aspect especially complicates the modeling and computation of these systems and requires one to revisit standard tools from numerical analysis from a probabilistic perspective. In this talk I will discuss recent advances that have been made in this context. For example, I will show how tools from Freidlin-Wentzell theory of large deviations and potential theoretic approaches to metastability can be used to develop numerical algorithms to accelerate the computations of reactive events arising in metastable systems. I will also explain how averaging theorems for singularly perturbed Markov processes can help develop schemes bridging micro- to macro-scales of description or compute free energies, etc. As illustrations, I will use a selection of examples from molecular dynamics, material sciences, and fluid dynamics and show how the confrontation with actual problems not only profits from the theory but also enriches it.

# Congress Plenary Lectures

Thursday, June 11, 8:30-9:30, in Room BA201

**Yingfei Yi, University of Alberta**

About the speaker: Yingfei Yi obtained his B.S. degree in classical mechanics from Jilin University in 1984 and his Ph.D degree in applied mathematics from the University of Southern California in 1990. His professional career started at Georgia Institute of Technology, first as a Postdoctoral Fellow at the Center for Dynamical Systems and Nonlinear Studies from 1990-1992, then at the School of Mathematics as an Assistant Professor from 1992-1997, an Associate Professor from 1997-2000, and a Professor from 2000. He jointed the Department of Mathematical and Statistical Sciences, the University of Alberta in 2014 as a Killam Memorial Chair in Dynamical Systems. He received a Rosenbaum Fellowship from the University of Cambridge in 1995, a University Research Fellowship from Jilin University in 1998, an Outstanding Young Scientist Award from NSFC in 2004, a Changjiang Scholarship from MoE, China and Li Ka Shing Foundation in 2008, and a Chinese National Qianren Research Chair Professorship in 2009 from MoE, China. He is a Co-editor in Chief for the Journal of Dynamics and Differential Equations, a handling editor for the Journal of Differential Equations, an editor for the Proceedings of the American Mathematical Society, an editor for the SIAM DSweb Magazine, and he is also an associate editor or a member of editorial board of three other professional journals. His research interests lie in dynamical systems and qualitative theory of differential equations.

## ***Multiscale Modeling of Soft Materials and Related Biological Responses***

Dynamical systems are often subjected to noise perturbations either from external sources or from their own intrinsic uncertainties. While it is well believed that noises can have dramatic effects on the stability of a deterministic system at both local and global levels, mechanisms behind noise surviving or robust dynamics have not been well understood especially from distribution perspectives. This talk attempts to outline a mathematical theory for making a fundamental understanding of these mechanisms in white noise perturbed systems of ordinary differential equations, based on the study of stationary measures of the corresponding Fokker-Planck equations. New existence and non-existence results of stationary measures will be presented by relaxing the notion of Lyapunov functions. Limiting behaviors of stationary measures as noises vanish will be discussed in connection to important issues such as stochastic stability and bifurcations.

# Congress Plenary Lectures

Thursday, June 11, 13:30-14:30, in Room BA201

**Nicholas Zabaras, University of Warwick**

About the speaker: Nicholas Zabaras received his PhD at Cornell University (1987) in the area of Theoretical and Applied Mechanics. Upon graduation he joined the faculty of Engineering at the University of Minnesota. In 1991 he returned to Cornell as a faculty member of the Sibley School of Mechanical and Aerospace Engineering where he was also member of various other academic fields including Applied Mathematics, Materials Science and Engineering and Computational Science and Engineering. He was the founding director of the Materials Process and Design Laboratory that integrated materials modelling and design with innovative mathematical approaches including inverse problems, uncertainty quantification, robust design, and scientific computing. In the summer of 2014 he joined the University of Warwick to establish and lead the Warwick Centre for Predictive Modelling. WCPM is a university wide initiative across many colleges and departments with emphasis on the integration of computational mathematics, computational statistics and scientific computing to address modelling and design of complex systems in the presence of uncertainties. He has received several awards including a Presidential Young Investigator Award in 1991. He is Fellow and member of various societies. In 2014, Prof. Zabaras was appointed as Hans Fisher Senior Fellow at the Institute of Advanced Study at the Technische Universität München. The same year he received the Royal Society's Wolfson Research Merit Award for his work on predictive modelling. He is currently an Associate Editor of the Journal of Computational Physics and the Editor in Chief of the International Journal for Uncertainty Quantification.

## *An Information Theoretic Approach to Computational Modelling in Engineering and the Sciences*

Predictive modelling and design of materials gives rise to unique mathematical and computational challenges including (i) Modelling of hierarchical random heterogeneous material structures; (ii) Propagating uncertainties in a quantifiable manner across spatial and temporal length scales (stochastic coarse graining); (iii) Addressing the curse of stochastic dimensionality; (iv) Addressing the phenomenology typical of most materials science models; (v) Modelling failure and rare events in random media; and many more.

We will advocate an information theoretic approach to address some of these challenges. In particular, we will discuss data-driven models of material structure, forward uncertainty propagation in high dimensions using limited data, variational approaches to stochastic coarse graining, and quantifying epistemic uncertainty when using surrogate models. We will finally address the importance of using probabilistic graphical models for predictive modelling of multiscale and multiphysics problems.

With synergistic developments in materials physics, computational mathematics/statistics, and machine learning there is potential for developing data-driven materials models that allow us to understand where observable variabilities in properties arise and provide means to control them for accelerated materials design.

# Congress Plenary Lectures: CFDSC Plenary Lecture

??Tuesday, June 9, 15:00-16:00, in Room N1001

**Rémi Abgrall, University of Zurich**

About the speaker: Rémi Abgrall is a former student of École Normale Supérieure de Saint Cloud. After his PhD, he has been engineer at ONERA, then research scientist at INRIA. Since January 2014, he is professor at the University of Zürich, Institute of Mathematics, after having been Professor in the University of Bordeaux (Institut Polytechnique de Bordeaux) since 1996 and in secondment at INRIA from 2008 till the end of 2013. He has been awarded an Advanced Research Grant from the ERC in December 2008 and has been invited speaker at the International Conference of Mathematicians (ICM 2014) in Seoul. He is associate editor of several international journals, including the Journal of Computational Physics, Mathematics of Computation, Computers and Fluids, the Journal of Scientific Computing. He is also co-chief editor of the International Journal on Numerical Methods in Fluids. His research is about efficient algorithms for the simulation of compressible materials (single fluids, multiphase, interface problems, compressible solids) using high order schemes designed for unstructured meshes. He also has interest in (curved) meshes generation for high order scheme and model reduction for transport dominated problems with and without discontinuities in the solution.

## ***Recent progress in the development of parameter free continuous finite element methods for compressible fluids***

In this talk, I will review the current status of the so-called Residual Distribution schemes applied, in particular, to compressible fluid dynamics problems. Other physical models include the Shallow Water equation and generalization, MHD, etc.

After the early work of R. Ni at Bombardier, and the seminal work of P.L Roe, in particular his 1981 JCP paper and its extensions to scalar multidimensional schemes, these schemes can be considered as finite element methods of the streamline diffusion type. The emphasis is put on non-oscillatory properties, in order to be able to compute flow discontinuities, so that they are nonlinear by construction. Indeed shock capturing is done in a totally different manner as for streamline diffusion, allowing for a class of parameter free schemes. In a way, the Residual Distribution methods can be seen as a kind of compromise between high order TVD-like finite difference/finite volume schemes and classical finite element methods, in that they borrow ideas from both communities: geometrical flexibility, the residual concept on one side, and non oscillatory, maximum principle on the other one.

In the talk, we will first consider the case of steady scalar hyperbolic problems, showing how one can systematically construct parameter free essentially non-oscillatory schemes. Then we will move towards steady advection diffusion problems, showing how uniform accuracy, whatever the Peclet/Reynolds number is. The last part of the talk we will consider recent work on unsteady problems. Examples of compressible flows (laminar and turbulent) will be also shown, in order to demonstrate the efficiency of the method, both in accuracy, memory footprint and CPU time.

This is joint work with many colleagues and students among whom Dante de Santis, Mario Ricchiuto, Algiane Froehly, Adam Larat, Mohamed Mezine at INRIA, and many discussions with H. Deconinck (VKI, Belgium) as well as Phil Roe (Michigan, USA). This work has been funded by several EU contracts: the FP6 ADIGMA project (contract AST5-CT-2006-030719), the FP7 IDIHOM project (contract AAT-2010-RTD-1-265780) and the ERC Advanced Grant ADDECCO (contract #226316), as well as a grant of the Swiss National Fund.

# Congress Plenary Lectures: CFDSC Plenary Lecture

??Tuesday, June 9, 10:00-12:00, in Room N1001

**Paul Fischer**, University of Illinois

About the speaker: Paul Fischer is a Blue Waters Professor at the University of Illinois, Urbana-Champaign in the departments of Computer Science and Mechanical Science & Engineering. He received his Ph.D. in mechanical engineering from MIT and was a post-doc in applied mathematics at Caltech, where he was the first Center for Research in Parallel Computation fellow. His work is in the area of high-order numerical methods for partial differential equations, scalable linear solvers, and high-performance computing. He is the architect of the open source SEM-based fluid dynamics/heat transfer code Nek5000, which has been recognized with the Gordon Bell Prize in high-performance computing and which has successfully scaled beyond a million processes. Nek5000 is currently used by over 200 researchers for a variety of applications in turbulence and heat transfer.

## *DNS/LES of Complex Turbulent Flows beyond Petascale*

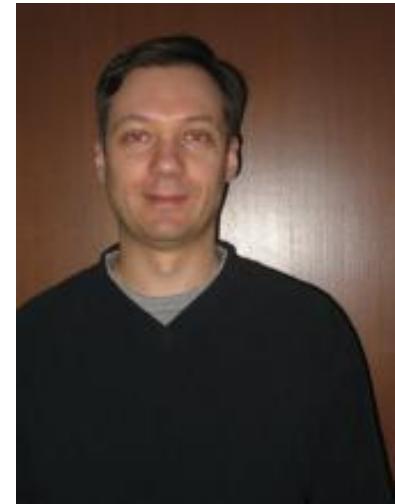

Petascale computing platforms currently feature million-way parallelism and it is anticipated that exascale computers with billion-way concurrency will be deployed in the early 2020s. In this talk, we explore the potential of computing at these scales with a focus on turbulent fluid flow and heat transfer in a variety of applications including nuclear energy, combustion, oceanography, vascular flows, and astrophysics. Following Kreiss and Oliger 72, we argue that high-order methods are essential for scalable simulation of transport phenomena. We demonstrate that these methods can be realized at costs equivalent to those of low-order methods having the same number of gridpoints. We further show that, with care, efficient multilevel solvers having bounded iteration counts will scale to billion-way concurrency. Using data from leading-edge platforms over the past 25 years, we analyze the scalability of state-of-the-art solvers to predict parallel performance on exascale architectures. The analysis sheds light on the expected scope of exascale physics simulations and provides insight to design requirements for future algorithms, codes, and architectures.

## 7. Congress Semi-Plenary Lectures

Wednesday, June 10, 10:00-11:00, in Room BA211

**Stephen Anco, Brock University**

About the speaker: Stephen Anco is a full professor in the Department of Mathematics & Statistics at Brock University, Canada. He is a co-author of two books in the Springer Applied Mathematics Series and has published over 60 papers. His research encompasses several areas of mathematical physics, including classical gauge field theory, General Relativity, symmetries and conservation laws of differential equations, integrable systems, and geometric curve flows. At Brock, he has served as Department Chair from 2009 to 2012 and Graduate Program Director from 2005 to 2007.

### *Conservation laws of fluid flow on Riemannian manifolds*

All local conservation laws of kinematic type on moving domains and moving surfaces for inviscid compressible fluid flow on curved Riemannian manifolds are derived. In particular, any such conservation laws will be found that hold only for (1) special dimensions of the manifold or the surface; (2) special conditions on the geometry of the manifold or the surface; (3) special equations of state. Importantly, the general form of these kinematic conservation laws will be allowed to depend on the intrinsic Riemannian metric, volume form, and curvature tensor of the manifold or the surface. All kinematic constants of motion that arise from the resulting kinematic conservation laws also will be determined. These results generalize earlier work on finding all kinematic local conservation laws on moving domains for inviscid compressible fluid flow in n-dimensional Euclidean space.

# Congress Semi-Plenary Lectures

Thursday, June 11, 15:00-16:00, in Room BA209

**Mike Bennett**, University of British Columbia

About the speaker: Michael Bennett is Professor and Head of the Mathematics Department at the University of British Columbia. Prior to coming to UBC, he held positions at The University of Illinois, The Institute for Advanced Study in Princeton, The University of Michigan and the University of Waterloo. He has authored more than 60 papers in Number Theory. In 2004, he was a recipient of the Ribenboim prize of the Canadian Number Theory Association.

## *Computing elliptic curves of fixed conductor*

I will discuss new, old and older still methods for computing elliptic curves with bad reduction outside given sets of primes. Applying these, we are now able to find models for all elliptic curves over the rationals with prime conductor bounded by  $10^{10}$  and, conjecturally, by  $10^{12}$ . I will then mention extensions of these results to the case of more general conductors and to curves over number fields. This is a joint work with Andrew Rechnitzer.

# Congress Semi-Plenary Lectures

Wednesday, June 10, 10:00-11:00, in Room BA102

**Tom Hurd, McMaster University**

About the speaker: Tom Hurd is Professor of Mathematics at McMaster University. He turned to the mathematical study of financial markets in the late 1990s, following his earlier research in mathematical physics. Since then he has written on a wide range of financial topics, with publications in portfolio theory, interest rate modelling, and credit risk. Over the past few years, his work has focussed on the mathematical modelling of systemic risk, that is, the stability of financial networks. His new book entitled “Contagion! The Spread of Systemic Risk in Financial Networks” is soon to be published. He has delivered a number of minicourses on this subject and, most recently, a one-semester PhD course at ETH Zurich. In addition to cofounding the M-Phimac Master program in Financial Mathematics at McMaster, which he continues to direct, he has supervised numerous undergraduate, M.Sc., Ph.D. and Postdoctoral researchers working in financial mathematics.

## *Modelling the Collapse of Financial Systems*

The list of possible channels of systemic risk (SR) includes correlated asset shocks, default contagion, funding liquidity contagion and market illiquidity effects. A number of deliberately simplified modelling frameworks, beginning with the Eisenberg-Noe 2001 model, aim to reveal the pure contagion effects that can lead to cascading chains of defaulted and illiquid financial institutions. It turns out that analytic methods can be brought to bear to determine the characteristics of such cascades on large random financial networks (RFN) that have a property we call local tree-like independence (LTI). In this talk, we review the conceptual basis of these methods in percolation theory on random graphs, and investigate how to extend them to interesting models of complex financial networks.

# Congress Semi-Plenary Lectures

Thursday, June 11, 10:00-11:00, in Room BA208

**Eduard-Wilhelm Kirr**, University of Illinois at Urbana-Champaign

About the speaker: Eduard-Wilhem Kirr is currently an associate professor in the Mathematics Department at University of Illinois Urbana-Champaign. He obtained his Ph.D. in Mathematics from University of Michigan in 2002 under the direction of Michael I. Weinstein and Anthony Bloch and was a Dickson Instructor at University of Chicago from 2002 to 2005 under the direction of Peter Constantin. During his graduate studies he was also a summer intern at Bell Laboratories. His main research interests focus on studying wave propagation and wave interaction using both theoretical methods and numerical simulations.

## *On long time dynamics in nonlinear wave equations*

Since the first description in 1834 of the “wave of translation,” currently called soliton, by John Scott Russell, scientist have studied intensely such particular solutions of nonlinear wave equations i.e., coherent structures that do not change shape as they propagate. They have been put to good use in nonlinear optics and telecommunications, and play an important role in understanding the formation of large waves in oceans and in analyzing large systems of quantum particles. Moreover their importance in describing the large time behavior of nonlinear wave models is summarized by the following: Asymptotic Completeness Conjecture: any initial data of a nonlinear wave equations evolves into a superposition of coherent structures plus a part that radiates to infinity. My presentation will summarize both our current knowledge on existence of coherent structures and recent progress towards solving the asymptotic completeness conjecture.

# Congress Semi-Plenary Lectures

Monday, June 8, 15:30-16:30, in Room BA209

**Georges Zaccour, École des Hautes Études commerciales de Montréal**

About the speaker: Georges Zaccour holds the Chair in Game Theory and Management and is a full professor of Department of Management Sciences at HEC Montréal. He holds a Ph.D. in management science, an M.Sc. in international business from HEC Montéal and a licence in mathematics and economics from Université Paris-Dauphine. He served as the director of GERAD, an interuniversity research center and the director of marketing department and Ph.D. program at HEC Montréal. His research areas are differential games, optimal control and operations research applied to marketing, energy sector and environmental management, areas in which he has published more than 140 papers and co-edited thirteen volumes. He coauthors the books Differential Games in Marketing and Games and Dynamic Games. His research is regularly funded by the Natural Sciences and Engineering Research Council of Canada. He is the editor-in-chief of Dynamic Games and Applications and associate editor of the International Game Theory Review, Environmental Modeling & Assessment, Computational Management Science, INFOR, and other journals. He is a fellow of The Royal Society of Canada and was the president of the International Society of Dynamic Games (2002-2006).

## ***Sustainability of Cooperation in Dynamic Games Played over Event Trees***

In this talk, I will first recall the main ingredients of the class of stochastic games where the uncertainty is described by an event tree. Assuming that the players wish to cooperate during the whole planning horizon, one needs to determine how to allocate the total cooperative outcome among the participant players. This can be easily done by using any cooperative game solution concept, such as the Shapley value and the core. The pending classical difficulty is how to insure that the players will stick to their cooperative strategies as time goes by. I propose a node-consistent Shapley value allocation as well as node-consistent core allocation such that each player finds it individually rational to continue to cooperate in the subgame starting at any node of the event tree, rather than deviating to her non-cooperative strategy.

17:00-18:00	Refreshments Served BA201	CAIMS Prize Winner's Lecture TBA TBA, Abstract & Biography on p. X (Chair: TBA)				

# Wednesday, June 10

Time	Room	Congress Plenary Lecture <i>Multiscale Modeling in a Stochastic Setting</i> Eric Vanden-Eijnden, Courant Institute, NYU, <a href="#">Abstract &amp; Biography</a> on p. 15 (Chair: H. Kunze (tentative))				
8:30-9:30	BA201					
9:30-10:00	BA Halls	Coffee Break & Poster Session				
	N1001/02/44	BA101	BA102	BA305	BA306	
10:00-12:00	ST-CFDSC #13-15 The 23rd Conference of the CFD Society of Canada	ST-MB #5 Mathematical Biology <i>Epidemiology 1</i>	SS-MFMCR #3 Mathematical Finance - Modeling, Computation and Risk Management	CS-BSM #3 Mathematics and Computation in Biological Sciences and Medicine	SS-CMPMC Computational Methods in Physical and Macromolecular Chemistry	
	BA202	BA208	BA209	BA210	BA211	
	ST-SCNA #5 The 2nd Canadian Symposium on Scientific Computing and Numerical Analysis	CS-MECHE #1 Computational Mechanics and Engineering	ST-IM #2 Industrial Mathematics <i>Inverse Problems in Industrial Applications</i>	CS-DSDE #2 Applications of Dynamical Systems and Differential Equations	SS-RALSMCL #1 Recent Advances in Lie Symmetry Methods and Conservation Laws for Differential Equations and Applications	
12:00-13:30	Conference Photo Shoot at 12:00 & Lunch					
13:30-14:30	BA201	Congress Plenary Lecture <i>Graph Analysis and Discrete Dynamic Modeling Elucidates the Outcomes of Within-cell Networks</i> Réka Albert, Pennsylvania State University, <a href="#">Abstract &amp; Biography</a> on p. 8 (Chair: R. Melnik (tentative))				
14:30-15:00	BA Halls	Coffee Break & Poster Session				
15:00-17:00	N1001/02/44	BA101	BA102	BA305	BA306	
	ST-CFDSC #16-18 The 23rd Conference of the CFD Society of Canada	ST-MB #6 Mathematical Biology <i>Epidemiology 2</i>	SS-EBMSAHS Equation-Based Modeling; Structural Analysis and Hybrid Systems	CS-CACO Computational Algebra, Combinatorics and Optimization	CS-CPC Computational Physics and Chemistry	
	BA202	BA208	BA209	BA210	BA211	
	ST-SCNA #6 The 2nd Canadian Symposium on Scientific Computing and Numerical Analysis	SS-MECHE #2 Computational Mechanics and Engineering	ST-IM #3 Industrial Mathematics <i>Modelling of Transport Processes in Industry</i>	CS-DSDE #3 Applications of Dynamical Systems and Differential Equations	SS-RALSMCL #2 Recent Advances in Lie Symmetry Methods and Conservation Laws for Differential Equations and Applications	
17:00-18:00	Refreshments Served BA201	CAIMS Prize Winner's Lecture TBA TBA, Abstract & Biography on p. X (Chair: TBA)				

# Thursday, June 11

Time	Room	Congress Plenary Lecture <i>Noise Impact on Finite Dimensional Dynamical Systems</i> <b>Yingfei Yi</b> , University of Alberta, <a href="#">Abstract &amp; Biography</a> on p. 16 (Chair: X. Zou (tentative))				
8:30-9:30	BA201					
9:30-10:00	BA Halls	Coffee Break & Poster Session				
	N1001/02/44	BA101	BA102	BA305	BA306	
		<b>ST-MB #7</b> Mathematical Biology <i>Ecology, Non-spatial</i>	<b>SS-MSMB #1</b> Modeling & Simulation in Medicine and Biology	<b>SS-MMNN #1</b> Mathematical Models for Nanoscience and Nanotechnology	<b>SS-GLS</b> Geocomputational Landscapes and Spaces	
10:00-12:00	BA202	BA208	BA209	BA210	BA211	
	<b>ST-SCNA #7</b> The 2nd Canadian Symposium on Scientific Computing and Numerical Analysis	<b>SS-WPA #1</b> Wave Propagation and Applications	<b>SS-CNT #1</b> Computational Number Theory	<b>SS-DDMDS #1</b> Data-Driven Methods for Dynamical Systems	<b>SS-RALSMCL #3</b> Recent Advances in Lie Symmetry Methods and Conservation Laws for Differential Equations and Applications	
12:00-13:30	Lunch					
13:30-14:30	BA201	Congress Plenary Lecture <i>An Information Theoretic Approach to Computational Modelling in Engineering and the Sciences</i> <b>Nicholas Zabaras</b> , University of Warwick, <a href="#">Abstract &amp; Biography</a> on p. 17 (Chair: R. Melnik (tentative))				
14:30-15:00	BA Halls	Coffee Break & Poster Session				
	N1001/02/44	BA101	BA102	BA305	BA306	
		<b>ST-MB #8</b> Mathematical Biology <i>Ecology, Spatial</i>	<b>SS-MSMB #2</b> Modeling & Simulation in Medicine and Biology	<b>SS-MMNN #2</b> Mathematical Models for Nanoscience and Nanotechnology	<b>CS-APMRE</b> Applied Problems and Methods in Research & Education	
15:00-17:00	BA202	BA208	BA209	BA210	BA211	
	<b>SS-FCP</b> Fractional Calculus ahd Probability	<b>SS-WPA #2</b> Wave Propagation and Applications	<b>SS-CNT #2</b> Computational Number Theory	<b>SS-DDMDS #2</b> Data-Driven Methods for Dynamical Systems	<b>SS-DDEMM #1</b> Delay Differential Equations as Mathematical Models of Real World Phenomena	
	<b>Refreshments Served</b>	CAIMS Prize Winner's Lecture <i>TBA</i> <b>TBA</b> , Abstract & Biography on p. X (Chair: TBA)				
17:00-18:00	BA201					
19:00-22:00	Waterloo Inn	Congress Banquet Dinner				

# Friday, June 12

Time	Room	Congress Plenary Lecture <i>On Fourier cosine expansions and wavelets for derivative pricing and risk management in computational finance</i> Kees Oosterlee, Delft University of Technology and CWI, <a href="#">Abstract &amp; Biography</a> on p. 13 (Chair: S. MacLachlan (tentative))				
8:30-9:30	BA201					
9:30-10:00	BA Halls	Coffee Break				
10:00-12:00	N1001/1002	BA101	BA102	BA305	BA306	
		CS-MODELING #1 Partial Differential and Integral Equations in Mathematical Modeling	CS-FINANCE #1 Financial Mathematics and Computation	SS-AAIP #1 Inverse Problems	SS-SSMBP #1 Simulations in Soft Matter and Molecular Bio-Physics	
	BA202	BA208	BA209	BA210	BA211	
	CS-ENV Mathematical Modelling in Environmental Sciences and Models for Complex Media	SS-WPA #3 Wave Propagation and Applications	SS-CNT #3 Computational Number Theory	SS-DASO Data Analytics for System Optimization	SS-DDEMM #2 Delay Differential Equations as Mathematical Models of Real World Phenomena	
12:00-13:30	Lunch					
13:30-14:30	BA201	Congress Plenary Lecture <i>Species Coexistence in Stochastic Environments: A Mathematical Perspective</i> Sebastian Schreiber, University of California, Davis, <a href="#">Abstract &amp; Biography</a> on p. 14 (Chair: F. Lutscher (tentative))				
14:30-15:00	BA Halls	Coffee Break				
15:00-17:00	N1001/02/44	BA101	BA102	BA305	BA306	
		CS-MODELING #2 Partial Differential and Integral Equations in Mathematical Modeling	CS-FINANCE #2 Financial Mathematics and Computation	SS-AAIP #2 Inverse Problems	SS-SSMBP #2 Simulations in Soft Matter and Molecular Bio-Physics

	MS2Discovery Institute Meeting		SS-CNT #4 Computational Number Theory		SS-DDEMM #3 Delay Differential Equations as Mathematical Models of Real World Phenomena	
17:00-18:00	Refreshments Served	CAIMS Prize Winner's Lecture TBA TBA, Abstract & Biography on p. X (Chair: TBA)				
	BA201	Congress Prizes & Award				

## **12. Parallel Sessions Schedule**

The following pages give the detailed speaker list for the morning and afternoon parallel session each day of the Congress.

**Monday, June 8**

# Monday, June 8: Morning

Time	Room	BA101	BA102	BA206	BA207
	ST-MB #1	SS-TMN #1	SS-WDSEE #1	SS-GAMCCM #1	
	Mathematical Biology <i>Human-Environment Systems</i> Chair: F. Lutscher University of Ottawa	Topics in Mathematical Neuroscience Chair: P. Greenwood University of British Columbia	Wealth Distribution and Statistical Equilibrium in Economics Chair: E. Scalas University of Sussex	Geometric and Analytic Methods in Classical and Celestial Mechanics Chair: L. Bakker Brigham Young University	
10:30-10:50	<i>Modelling human-environment interactions and their impact bistability in forest-grassland mosaics</i> <b>M. Anand</b> University of Guelph	<i>Exploring firing patterns of stellate cells</i> <b>P. Rowat</b> University of California San Diego	<i>Statistical Mechanics of Inequality in Distributions of Money, Income, Debt, and Energy Consumption</i> <b>V. Yakovenko</b> University of Maryland	<i>Orthogonal separation of the Hamilton-Jacobi equation on Spaces of Constant curvature</i> <b>K. Rajaratnam</b> University of Waterloo	
10:50-11:10	<i>A Local Optimization Approach to Resolving Conservation Conflicts in Mosaic Ecosystems</i> <b>S. Nowack</b> University of Guelph	<i>Nonlocal oscillations in membrane potential provoked by a slow current ramp</i> <b>L. Bilinsky</b> Duke University	<i>Thermodynamics of inequalities</i> <b>M. Smerlak</b> Perimeter Institute for Theoretical Physics	<i>Aspects of Finsler geometry behind Lagrangian mechanical systems</i> <b>T. Mestdag</b> Ghent University	
11:10-11:30	<i>The MIRACLE project: Tools and analysis methods for output from agent-based models of coupled human-natural systems</i> <b>D. Parker</b> University of Waterloo	<i>Sleep and Thermoregulation</i> <b>J. Best</b> Ohio State University	<i>The Equilibrium-Seeking Behaviour of a Very Simple Model of Wealth</i> <b>G. Boyle</b> Orrery Software	<i>F-manifolds, eventual identities and multi-flat structures</i> <b>A. Arsie</b> University of Toledo	
11:30-11:50	<i>Interactions Between Simultaneous Behaviourally-Driven Disease Interventions in a Model of Seasonal Influenza</i> <b>M. Andrews</b> University of Guelph	<i>Projecting Biochemistry Over Long Distances</i> <b>M. Reed</b> Duke University	<i>Kinetic models for wealth distribution</i> <b>B. Düring</b> University of Sussex	<i>Compatible quadratic Poisson brackets related to a family of elliptic curves</i> <b>T. Wolf</b> Brock University	
11:50-12:10	<i>Modelling human-environment interactions and their impact on conservation incentive effectiveness in forest ecosystems</i> <b>C. Bauch</b> University of Waterloo			<i>Canonoid and Poissonoid Transformations, Symmetried and Bi-Hamiltonian Structures</i> <b>M. Santoprete</b> Wilfrid Laurier University	
12:10-12:30					

# Monday, June 8: Morning

Time	Room	BA202	BA208	BA209	BA210	BA211
	<b>ST-SCNA #1</b> The 2nd Canadian Symposium on Scientific Computing and Numerical Analysis Chair: H. De Sterck University of Waterloo	<b>ST-ACM #1</b> Applied and Computational Mechanics Chair: I.Y. Kim Queen's University	<b>SS-GTA #1</b> Game Theory: Applications and Evolutionary Games Chair: J. Apaloo St. Francis Xavier University	NSERC Discovery Grant Information Session	<b>SS-MACHS #1</b> Modeling, Analysis and Control in Hybrid Systems Chair: X. Liu University of Waterloo	
10:30-10:50	<i>Implicitly Padded Convolutions on Hybrid Parallel Architectures</i> <b>J. Bowman</b> University of Alberta	<i>A quadrilateral spectral multidomain penalty method model for the simulation of environmental stratified flow processes: towards an efficient pressure solver</i> <b>P. Diamessis</b> Cornell University	<i>Truncation selection and the ESS</i> <b>B. Morsky</b> University of Guelph		<i>On Pinning Control, Synchronization and Controllability of Complex Networks</i> <b>G. Chen</b> City University of Hong Kong	
10:50-11:10	<i>A Fast Solver for Dense Linear Systems: The Inverse Fast Multipole Method</i> <b>P. Coulier</b> Katholieke Universiteit Leuven	<i>Large eddy simulation of stratified turbulence</i> <b>M. Waite</b> University of Waterloo	<i>The Maximum Number of Coexisting Species in Evolutionary Dynamics</i> <b>J. Apaloo</b> St. Francis Xavier University		<i>Switching controlled synchronization of nonlinear systems with time-delays</i> <b>P. Stechlinski</b> Massachusetts Institute of Technology	
11:10-11:30	<i>The Sphere Decoding Approach for Mixed Integer Least Squares Problems</i> <b>X-W. Chang</b> McGill University	<i>Internal Wave Boundary Layer Interaction: a novel instability over broad topography</i> <b>S. Harnanan</b> University of Waterloo	<i>Evolutionary game theory under time constraint</i> <b>R. Cressman</b> Wilfrid Laurier University		<i>A new measure of robust stability for impulsive differential equations</i> <b>K. Church</b> University of Ottawa	
11:30-11:50	<i>A Nonlinearly Preconditioned Conjugate Gradient Algorithm for Rank-R Canonical Tensor Approximation</i> <b>M. Winlaw</b> University of Waterloo	<i>Coriolis forces control the secondary circulation and erosion patterns in large submarine turbidity currents</i> <b>C. Wells</b> Yale University	<i>The worlds biomes and primary production as a foraging game played by plants</i> <b>G. McNickle</b> Wilfrid Laurier University		<i>Pinning Stabilization of Cellular Neural Networks with Time-Delay Via Delayed Impulses</i> <b>K. Zhang</b> University of Waterloo	
11:50-12:10	<i>Matrix Manifold Optimization Methods for Tucker Tensor Approximations</i> <b>A. Howse</b> University of Waterloo	<i>The influence of bottom topography on energy transfer between length scales</i> <b>M. Stastna</b> University of Waterloo	<i>Understanding the Dynamics of Infinite Niche Packing through Simulations</i> <b>A. Holloway</b> University of Illinois at Chicago		<i>Input-to-State Stability and <math>H_\infty</math> Performance for Stochastic Control Systems with Piecewise Constant Arguments</i> <b>M. Alwan</b> University of Waterloo	
12:10-12:30	<i>Reconstruction of Dynamic SPECT Images</i> <b>M. Trummer</b> Simon Fraser University	<i>A moving-mesh method for spectral collocation solutions of partial differential equations</i> <b>C. Subich</b> Environment Canada	<i>Evolution of cooperation in a multidimensional phenotype space</i> <b>D. Kroumi</b> Université de Montréal		<i>Switched singularly perturbed systems with reliable controllers</i> <b>T. Sugati</b> University of Waterloo	

# Monday, June 8: Morning

Time	Room	N1001	N1002	N1044
	<b>ST-CFDSC #1</b> The 23rd Conference of the CFD Society of Canada Chair: xxxxx Affiliation	<b>ST-CFDSC #2</b> The 23rd Conference of the CFD Society of Canada Chair: xxxxx Affiliation	<b>ST-CFDSC #3</b> The 23rd Conference of the CFD Society of Canada Chair: xxxxx Affiliation	
10:30-10:50				
10:50-11:10				
11:10-11:30				
11:30-11:50				
11:50-12:10				
12:10-12:30				

# Monday, June 8: Afternoon

Time	Room	BA101	BA102	BA206	BA207
	ST-MB #2	SS-TMN #2	SS-WDSEE #2	SS-GAMCCM #2	
	Mathematical Biology <i>Evolution</i> Chair: H. Eberl University of Guelph	Topics in Mathematical Neuroscience Chair: L. Bilinsky Duke University	Wealth Distribution and Statistical Equilibrium in Economics Chair: B. Düring University of Sussex	Geometric and Analytic Methods in Classical and Celestial Mechanics Chair: M. Santoprete Wilfrid Laurier University	
15:30-15:50	<i>Modelling RNA Replication in the RNA World</i> <b>P. Higgs</b> McMaster University	<i>PDEs with stochastically switching boundary conditions and application to the control of neurotransmitter concentration</i> <b>S. Lawley</b> University of Utah	<i>Exploring the origin of inequality in academic background-oriented society</i> <b>J. Inoue</b> Hokkaido University	<i>Nose-Hoover Thermostats</i> <b>L. Butler</b> North Dakota State University	
15:50-16:10	<i>Multitype Branching Processes in Continuous Time Predict Adaptation Rates in Bacteria</i> <b>L. Wahl</b> Western University	<i>A computational model of the influence of depolarization block on initiation of seizure-like activity</i> <b>D. Nykamp</b> University of Minnesota	<i>Statistical Equilibria in A Discrete Choice Model of Financial Markets</i> <b>T. Kaizoji</b> International Christian University	<i>On the Problem of Similar Motions of a Chain of Coupled Heavy Rigid Bodies</i> <b>D. Chebanov</b> City University of New York	
16:10-16:30	<i>Information Theory and the Evolvability of Biological Populations</i> <b>T. Day</b> Queen's University	<i>Bursting in Networks of Integrate and Fire Neurons</i> <b>S.A. Campbell</b> University of Waterloo	<i>Finitary probabilistic methods in Economics</i> <b>E. Scalas</b> University of Sussex	<i>A continuation theorem in classical mechanics</i> <b>C. Stoica</b> Wilfrid Laurier University	
16:30-16:50	<i>The Birth-Death-Diversification Model of Mobile Genetic Elements in Prokaryotes</i> <b>M. Rabbani</b> University of Western Ontario	<i>Neuromodulation and heterogeneity in neural networks</i> <b>V. Booth</b> University of Michigan		<i>An extended notion of Entropy</i> <b>R. Smirnov</b> Dalhousie University	
16:50-17:10	<i>Refining a theory for the alternative life history strategies of a freshwater fish</i> <b>G. Wild</b> University of Western Ontario	<i>Modeling Populations of Neurons</i> <b>P. Greenwood</b> University of British Columbia		<i>Aspects and Applications of Quasi-homogeneous Potentials</i> <b>J. Arredondo</b> Konrad Lorenz University	
17:10-17:30					

# Monday, June 8: Afternoon

Time	Room	BA202	BA208	BA209	BA210	BA211
	<b>ST-SCNA #2</b> The 2nd Canadian Symposium on Scientific Computing and Numerical Analysis Chair: TBA Affiliation	<b>ST-ACM #2</b> Applied and Computational Mechanics Chair: M. Stastna University of Waterloo	<b>SS-GTA #2</b> Game Theory: Applications and Evolutionary Games Chair: M. Cojocaru University of Guelph	<b>ST-AADS #1</b> Applied Analysis and Dynamical Systems Chair: TBA Affiliation	<b>SS-MACHS #2</b> Modeling, Analysis and Control in Hybrid Systems Chair: P. Stechlinski Massachusetts Institute of Technology	
15:30-15:50	<i>B-spline Adaptive Gaussian Collocation for Error Controlled Numerical Solutions of ODEs and PDEs</i> <b>P. Muir</b> Saint Mary's University	<i>Dynamics of vortex Rossby waves in tropical cyclones</i> <b>L. Campbell</b> Carleton University	<b>Semi-plenary Lecture</b> <i>Sustainability of Cooperation in Dynamic Games Played over Event Trees</i> <b>G. Zaccour</b> École des Hautes Études commerciales de Montréal <a href="#">Abstract &amp; Biography</a> on p. 24	<i>Derivation of the Stochastic Hartree Equation in the Presence of Multiplicative Noise</i> <b>W. Abou Salem</b> University of Saskatchewan	<i>Stability Properties of Singular Systems Subject To Impulsive Effects</i> <b>H. Kiyak</b> University of Waterloo	
15:50-16:10	<i>Adaptive Time-stepping in the Numerical Solution of the Reaction-Diffusion Master Equation</i> <b>S. Ilie</b> Ryerson University	<i>Double Diffusive Sedimentation in Sediment Laden Interflows</i> <b>S. Davaparnah Jazi</b> University of Toronto		<i>Some partial results on the dynamics of a nonlinear wave equation</i> <b>J. Esquivel-Avila</b> Universidad Autónoma Metropolitana	<i>On a Topological Obstruction in the Reach Control Problem</i> <b>M. Ornik</b> University of Toronto	
16:10-16:30	<i>A high-order solution-adaptive simulation framework for hyperbolic conservation laws on cubed-sphere grids</i> <b>L. Ivan</b> University of Waterloo	<i>Modeling the behavior of confined colloidal particles under shear flow</i> <b>C. Denniston</b> University of Western Ontario		<i>A modified discrete time nonlinear sliding mode observer with application to diffusion equation</i> <b>S. Afshar</b> University of Waterloo	<i>New master-slave synchronization criteria of chaotic Lur'e systems with time-varying-delay feedback control</i> <b>K. Shi</b> University of Electronic Science and Technology of China	
16:30-16:50	<i>A fast-marching method for non-monotonically evolving fronts</i> <b>A. Tcheng</b> McGill University	<i>Eulerian modelling of air-droplets flow: Perspectives and numerical solutions</i> <b>K. Sana</b> University of Ottawa	<i>The Emergence of Cooperative Breeding Systems with Resource Allocation</i> <b>J. Dunn</b> University of Western Ontario	<i>Strong convergence and stability of Kirk-multistep-type iterations for contractive-type operators with Applications</i> <b>H. Akewe</b> University of Lagos	<i>Passivity analysis of the stochastic system with time delay</i> <b>Y. Du</b> University of Electronic Science and Technology of China	
16:50-17:10	<i>A numerical framework for tracking interfaces in generalized Mullins-Sekerka dynamics</i> <b>B. Wetton</b> University of British Columbia	<i>Self-similar reversing interfaces (contact lines) for the porous medium equation with absorption</i> <b>J. Foster</b> McMaster University	<i>An Evolutionary Game Approach for Dynamic Resource Allocation Problems</i> <b>A. Pashaie</b> University of Toronto	<i>Computability of Fixed Points in Analog Systems</i> <b>D. Poças</b> McMaster University		
17:10-17:30			<i>Coalitional operating room planning and scheduling</i> <b>D. Aleman</b> University of Toronto	<i>A Holistic Framework for Analysing General Failure and Safety Problems</i> <b>F. Sun</b> University of Waterloo		
17:30-17:50			<i>The evolution of inequity aversion under local competition</i> <b>P. Barclay</b> University of Guelph			

Tuesday, June 9

# Tuesday, June 9: Morning

Time	Room	BA101	BA102	BA305	BA306
		<b>ST-MB #3</b> Mathematical Biology <i>Biofilms and Industrial</i> Chair: T. Day Queen's University	<b>SS-MFMCR #1</b> Mathematical Finance - Modeling, Computation and Risk Management Chair: TBA Affiliation	<b>CS-BSM #1</b> Mathematics and Computation in Biological Sciences and Medicine Chair: TBA Affiliation	<b>SS-GAMCCM #3</b> Geometric and Analytic Methods in Classical and Celestial Mechanics Chair: R. McLenaghan University of Waterloo
10:00-10:20		<i>A Fully Spatially Structured Metapopulation Model for Predator-Prey Dynamics</i> <b>M. Garvie</b> University of Guelph	<i>A Framework for Efficient Valuation of Large Portfolios of Unit-Linked Insurance Products</i> <b>K. Jackson</b> University of Toronto	<i>Mathematical Model of HIV and HCV coinfection</i> <b>B. Aggarwal</b> University of Calgary	<i>Index theory in Celestial Mechanics: recent results and new perspectives</i> <b>A. Portaluri</b> Università di Torino
10:20-10:40		<i>Non-standard numerical schemes for approximating predator-prey dynamics</i> <b>B. Corbett</b> University of Guelph	<i>Dimension and Variance Reduction for Monte Carlo Methods for High-Dimensional Models in Finance</i> <b>K. Jackson</b> University of Toronto	<i>In-host HIV model describes differences in disease progression among patients infected with HIV-1 subtypes A, C and D</i> <b>D. Dick</b> University of Western Ontario	<i>Morse index and linear stability of some equivariant solutions for N-body-type problems via index theory</i> <b>V. Barutello</b> University of Turin
10:40-11:00		<i>Dispersal Under Recolonization of Regenerating Landscape</i> <b>R. Tyson</b> University of British Columbia (Okanagan)	<i>Efficient Convergent Lattice Method for Asian Options Pricing with Superlinear Complexity</i> <b>W. Xu</b> University of Waterloo	<i>Comparison of a Stochastic and Deterministic Model for the Transmission Dynamics of Ebola Virus Disease</i> <b>A. Khan</b> Lahore University of Management Sciences	<i>A Separating Surface for Sitnikov-like (n+1)-Body Problems</i> <b>L. Bakker</b> Brigham Young University
11:00-11:20		<i>Wave Blocking Phenomena in Periodic Landscapes</i> <b>J. Dowdall</b> University of Ottawa	<i>Accurate Operator Splitting Approximation for Pricing CEV Spread Options</i> <b>C-F. Lo</b> Chinese University of Hong Kong	<i>Population dynamics of lysogenic and lytic strategies during phage-bacteria interactions</i> <b>Q. Ali</b> University of Western Ontario	<i>Stability and Bifurcation of the Hip-Hop orbit</i> <b>P.L. Buono</b> University of Ontario Institute of Technology
11:20-11:40		<i>On a reaction diffusion system for the sterile insect release method in a bounded domain</i> <b>X. Zou</b> University of Western Ontario	<i>Algorithms for Finding Copulas Minimizing Convex Functions of Sums and Applications to Finance and Risk Management</i> <b>C. Bernard</b> Grenoble École de Management	<i>A numerical study of the effects of inhomogeneous media in Diffusion Weighted Imaging</i> <b>J. Cervi</b> University of Ontario Institute of Technology	
11:40-12:00			<i>Correlated Poisson Processes</i> <b>A. Kreinin</b> IBM, Risk Analytics		

# Tuesday, June 9: Morning

Time	Room	BA202	BA208	BA209	BA210	BA211
		<b>ST-SCNA #3</b> The 2nd Canadian Symposium on Scientific Computing and Numerical Analysis Chair: B. Adcock Simon Fraser University	<b>ST-ACM #3</b> Applied and Computational Mechanics Chair: J. Foster McMaster University	<b>SS-GTA #3</b> Game Theory: Applications and Evolutionary Games Chair: TBA Affiliation	<b>ST-AADS #2</b> Applied Analysis and Dynamical Systems Chair: TBA Affiliation	<b>SS-MMPND</b> Matrix Manifold Problems subject to Noisy Data Chair: F. Burkowski & H. Wolkowicz University of Waterloo
10:00-10:20		<i>Numerical solution of the Kuramoto-Sivashinsky initial-boundary value problem</i> <b>L. van Veen</b> University of Ontario Institute of Technology	<i>Topology optimization and its applications in aerospace design and planetary vehicle design</i> <b>I.Y. Kim</b> McMaster University	<i>Deck Based Versions of Mathematical Games</i> <b>D. Ashlock</b> University of Guelph	<i>Bifurcations in a system of two coupled delayed feedback loops</i> <b>J. Bélair</b> Université de Montréal	<i>Higher-order singular value decomposition from incomplete data</i> <b>Y. Xu</b> University of Waterloo
10:20-10:40		<i>Padé Time Stepping Method of Rational Form for PDEs</i> <b>S. Algami</b> King Fahd University of Petroleum & Minerals	<i>Application of a Genetic Algorithm to Optimize Work Hardening Parameters Used in Plasticity Modelling of a Zirconium Alloy</i> <b>T. Skippon</b> Queen's University	<i>Time-dependent casual encounters games and HIV spread</i> <b>S. Athar</b> University of Guelph	<i>Degenerate Hopf Bifurcations in DDEs and Endemic Bubbles</i> <b>V. LeBlanc</b> University of Ottawa	<i>Scalable Manifold Learning by Isometric Patch Alignment</i> <b>A. Ghodsi</b> University of Waterloo
10:40-11:00		<i>An embedding method for the numerical approximation of partial differential equations on moving surfaces</i> <b>S. Ruuth</b> Simon Fraser University	<i>A New Numerical Approach for Linear and Non-Linear Advection</i> <b>J-C. Nave</b> McGill University	<i>Spatial Spread of an Epidemic through Public Transportation Systems with a Hub</i> <b>F. Xu</b> Wilfrid Laurier University	<i>The Slow Dynamics of Localized Spot Patterns for Reaction-Diffusion Systems on the Sphere</i> <b>M. Ward</b> University of British Columbia	<i>On rigidity theory of bar frameworks</i> <b>A. Alfaikih</b> University of Windsor
11:00-11:20		<i>A multirate accelerated Schwarz Waveform Relaxation Method</i> <b>M. Khaled</b> Memorial University of Newfoundland	<i>Formation and Switching Dynamics of Nematic Liquid Crystalline Domains</i> <b>N.M. Abukhdeir</b> University of Waterloo	<i>Using Heritage To Determine Strategy In Multi-Agent Systems</i> <b>A. Hlynka</b> University of Windsor	<i>Patterned vegetation, tipping points, and the rate of climate change</i> <b>T. Kolokolnikov</b> Dalhousie University	<i>Protein Structure Network Models on the Euclidean Distance Matrix Cone</i> <b>X-B. Li</b> University of Waterloo
11:20-11:40		<i>Relaxation method for the nonlinear <math>p</math>-curl problem in applied superconductivity : a relaxed Yee scheme</i> <b>M. Laforest</b> École Polytechnique de Montréal	<i>Multiscale computational mechanics for non-linear behavior of lattice materials</i> <b>D. Pasini</b> McGill University	<i>The Emergence of Equilibrium Help Strategies in a Model of Competitive Helping</i> <b>E. Wild</b> University of Guelph	<i>Non-radial multi-vortex solutions to the magnetic Chern-Simon-Higgs equations</i> <b>F. Ting</b> Hong Kong Polytechnic University	<i>Modeling protein loops using Frenet frames, inverse kinematics</i> <b>F. Burkowski</b> University of Waterloo
11:40-12:00		<i>The multiplier method of constructing conservative finite difference schemes for differential equations</i> <b>A. Wan</b> McGill University	<i>The Interaction Between Swimming Plankton and Internal Waves</i> <b>J. Shaw</b> University of Waterloo	<i>The evolution of body size in ecological food web networks</i> <b>R. Rael</b> Tulane University	<i>Studies of Annular Smectic Electroconvection</i> <b>M. Pugh</b> University of Toronto	<i>Noisy Sensor Network Localization: Robust Facial Reduction and the Pareto Frontier</i> <b>H. Wolkowicz</b> University of Waterloo

# Tuesday, June 9: Afternoon

Time	Room	BA101	BA102	BA305	BA306
		<b>ST-MB #4</b> Mathematical Biology Chair: L. Wahl University of Western Ontario	<b>SS-MFMCR #2</b> Mathematical Finance - Modeling, Computation and Risk Management Chair: TBA Affiliation	<b>CS-BSM #2</b> Mathematics and Computation in Biological Sciences and Medicine Chair: TBA Affiliation	<b>SS-CP</b> Computational Physics Chair: M. Wartak Wilfrid Laurier University
15:00-15:20		<i>Spatially Structured Neural Systems</i> <b>P. Greenwood</b> University of British Columbia	<i>On Optional Processes and Financial Market Modelling</i> <b>A. Melnikov</b> University of Alberta	<i>A quantitative model of cutaneous melanoma diagnosis using thermography</i> <b>E. Agyingi</b> Rochester Institute of Technology	<i>Numerical simulation of Stimulated Brillouin Scattering instability in LPI</i> <b>H. Xiaoyan</b> Institute of Applied Physics and Computational Mathematics
15:20-15:40		<i>Modelling and Analysis of the Relapse-Remission Behavior in Autoimmune Diseases</i> <b>W. Zhang</b> York University	<i>Comparative Analysis of Warrants Pricing Models</i> <b>A.X. Zhou</b> University of Western Ontario	<i>Effects of a Mixed Immuno-chemotherapy of Tumor by Impulsive Control</i> <b>Q. Wang</b> Shepherd University	<i>Two dimensional nodal Riemann solver based on one dimensional Riemann solver for a cell-centered Lagrangian scheme</i> <b>Y. Liu</b> Institute of Applied Physics and Computational Mathematics
15:40-16:00		<i>Modeling dynamic changes in immune tolerance during type 1 diabetes progression</i> <b>M. Jaber-Douraki</b> McGill University	<i>Financial Modeling with multivariate mixed Fractional Brownian motion</i> <b>A. Alvarez</b> Ryerson University	<i>Regulation and Interaction of Cytokines During a Cytokine Storm</i> <b>M. Wilcox</b> University of Guelph	<i>New accurate reduced mathematical model for particle beam simulation</i> <b>F. Assous</b> Ariel University

# Thursday, June 11: Afternoon

Time	Room	BA202	BA208	BA209	BA210	BA211
	SS-FCP	SS-WPA #2	SS-CNT #2	CS-DDMDS #2	SS-DDEMM #1	
	Fractional Calculus and Probability  Chair: E. Scalas University of Sussex	Wave Propagation and Applications  Chair: C. Turc New Jersey Institute of Technology	Computational Number Theory  Chair: TBA Affiliation	Data-Driven Methods for Dynamical Systems  Chair: D. Giannakis New York University	Delay Differential Equations as Mathematical Models of Real World Phenomena  Chair: E. Braverman University of Calgary	
15:00-15:20	<i>Exactly-solvable non-Markovian dynamic network</i>  <b>E. Scalas</b> University of Sussex	<i>A High Order Method for Electromagnetic Scattering from Metallic Gratings</i>  <b>M. Haslam</b> York University	<b>Semi-plenary Lecture</b>  <i>Computing elliptic curves of fixed conductor</i>	<i>Variable-free and equation-free computation</i>  <b>Y. Kevrekidis</b> Princeton University	<i>Zero-Hopf bifurcation in the Van der Pol oscillator with delayed feedback</i>  <b>J. Bramburger</b> University of Ottawa	
15:20-15:40	<i>Motions among random obstacles in hyperbolic spaces</i>  <b>C. Ricciuti</b> University of Rome	<i>Efficient high-order integral equation methods for problems of scattering by defects in layered media</i>  <b>C. Perez-Arcibia</b> California Institute of Technology		<i>Data-driven reduction for multiscale stochastic dynamical systems</i>  <b>R. Talmon</b> Technion - Israel Institute of Technology	<i>Delay Stochastic Models in Finance</i>  <b>A. Swishchuk</b> University of Calgary	
15:40-16:00	<i>Integro-differential operators and non-decreasing processes with independent increments</i>  <b>B. Toaldo</b> University of Rome	<i>High order penalty methods: a Fourier approach to solving PDE's on domains with curved boundaries</i>  <b>D. Shirokoff</b> New Jersey Institute of Technology	<b>M. Bennett</b> University of British Columbia <a href="#">Abstract &amp; Biography</a> on p. 21	<i>Geometric Methods for the approximation of high-dimensional dynamical systems</i>  <b>M. Maggiori</b> Duke University	<i>Investigating the impact of pharmacokinetic variability on physiological models with delays: A case study of neutrophil development, zalyspsis, and filgrastim</i>  <b>M. Craig</b> Université de Montréal	
16:00-16:20	<i>Source solution for the fractal Burgers equation with the critical exponent</i>  <b>T. Jakubowski</b> Wroclaw University of Technology	<i>Discontinuous Galerkin Schemes for the Relativistic Vlasov-Maxwell System</i>  <b>J. Roszmanith</b> Iowa State University	<i>Divisor Tripling On Genus 2 Hyperelliptic Curves</i>  <b>S. Lindner</b> University of Calgary	<i>Nonparametric uncertainty quantification methods for gradient flows with isotropic diffusions</i>  <b>J. Harlim</b> Pennsylvania State University	<i>Periodic solutions of a singular delay differential equation</i>  <b>A. Ivanov</b> Pennsylvania State University	
16:20-16:40	<i>Spectral representation of the solution to the Cauchy problem associated to fractional operators</i>  <b>Y. Zhao</b> Cornell University	<i>Integral equation methods for Laplace eigenvalue problems</i>  <b>E. Akhmetgaliyev</b> California Institute of Technology	<i>Picard curves with good reduction away from <math>p = 3</math></i>  <b>B. Malmskog</b> Villanova University	<i>Data-driven forecasting without a model and with a partially known model</i>  <b>T. Berry</b> Pennsylvania State University	<i>Post-Newtonian Gravitation</i>  <b>E. Verriest</b> Georgia Institute of Technology	
16:40-17:00	<i>Ground state properties of non-local Schrödinger operators and jump processes</i>  <b>J. Lörinczi</b> Loughborough University	<i>Regularity and multigrid analysis for axisymmetric equations.</i>  <b>H. Li</b> Wayne State University	<i>Computing rational curves on quasihyperbolic surfaces</i>  <b>N. Bruin</b> Simon Fraser University		<i>Existence and stability of hybrid systems with time delay</i>  <b>X. Liu</b> University of Waterloo	
17:00-17:20		<i>A robust inversion method for quantitative 3D shape reconstruction from coaxial eddy-current measurements</i>  <b>M. Riahi</b> New Jersey Institute of Technology			<i>Transmission Dynamics of Multiple Species of Malaria Parasites with Time Delay</i>  <b>M. Ngwa</b> Rochester Institute of Technology	

**Friday, June 12**

# Friday, June 12: Morning

Time	Room	BA101	BA102	BA305	BA306
		<b>CS-MODELING #1</b> Partial Differential and Integral Equations in Mathematical Modeling Chair: TBA Affiliation	<b>CS-FINANCE #1</b> Financial Mathematics and Computation Chair: TBA Affiliation	<b>SS-AAIP #1</b> Inverse Problems Chair: D. La Torre University of Milan	<b>SS-SSMBP #1</b> Simulations in Soft Matter and Molecular Bio-Physics Chair: H.S. Chan University of Toronto
10:00-10:20		<i>Fourth-Order Finite Difference Schemes for Numerical Solution of PDEs Using the Cartesian Cut-Stencil Method</i> <b>R. Barron</b> University of Windsor	<i>Pricing Options with Hybrid Stochastic Volatility Models</i> <b>G. Jones</b> Wilfrid Laurier University	<i>A V-variable approach to fractal image compression</i> <b>F. Mendivil</b> Acadia University	<i>Spatial organization of a chain molecule in a crowded and confined space</i> <b>B-Y. Ha</b> University of Waterloo
10:20-10:40		<i>Method of Lines Transpose: High-order L-stable schemes for the reaction-diffusion equations using resolvent expansion</i> <b>H. Cho</b> Michigan State University	<i>Simulation of timer options under stochastic interest rates</i> <b>B. Hu</b> Wilfrid Laurier University	<i>A smoothing technique for image processing with sparsity</i> <b>D. La Torre</b> University of Milan	<i>Nanomotor dynamics in a chemically oscillating environment</i> <b>B. Robertson</b> University of Toronto
10:40-11:00		<i>A Simple Method for Solving PDEs on Point Clouds</i> <b>Z. Lahdari</b> Université de Caen Basse-Normandie	<i>Machine learning: modeling risky behaviour and financial fraud detection</i> <b>D. Sawh</b> University of Waterloo	<i>Predicting visual degradation of image subblocks produced by JPEG and JPEG2000 compression</i> <b>A. Cheeseman</b> University of Waterloo	<i>Mesoscopic simulation method of lipid bilayers and active membrane machines</i> <b>M-J. Huang</b> University of Toronto
11:00-11:20		<i>Optimal dissipation in partial differential equations</i> <b>A. Vest</b> University of Waterloo	<i>European Options with Fuzzy Stock Price</i> <b>P. Pandit</b> The Maharaja Sayajirao University of Baroda	<i>Circle Inversion Map and Star-shaped Set Inversion Map Fractals</i> <b>B. Boreland</b> University of Guelph	<i>Role of Multilamellar Lipid Matrices in Polymerization of Organic Monomers in the Prebiotic World</i> <b>M. Nategholeslam</b> McMaster University
11:20-11:40		<i>Spectral Convergence And Turing Patterns For Nonlocal Diffusion Systems</i> <b>G. Zhao</b> University of the West Indies	<i>Risk-Neutral Intensity of Default Model for Credit Risk Modeling</i> <b>E. Majdi</b> University of Sfax	<i>Inverse problems via the "Generalized Collage Theorem" for vector-valued Lax Milgram-based variational problems</i> <b>K. Levere</b> University of Guelph	<i>Concentration Dependent Properties of RNA Nanoclusters in Salt-Based Solutions using Molecular Dynamics Simulation</i> <b>S. Badu</b> Wilfrid Laurier University
11:40-12:00		<i>Approximate Solution Of Some Boundary Value Problems</i> <b>M. Chumburidze</b> Akaki Tsereteli State University	<i>On double barrier exit probabilities for the classical risk process with diffusion</i> <b>D. Teneng</b> University of Tartu		

# Friday, June 12: Morning

Time	Room	BA202	BA208	BA209	BA210	BA211
	<b>CS-ENV</b>	<b>SS-WPA #3</b>	<b>SS-CNT #3</b>	<b>SS-DASO</b>	<b>SS-DDEM #2</b>	
	Mathematical Modelling in Environmental Sciences and Models for Complex Media  Chair: TBA Affiliation	Wave Propagation and Applications  Chair: E-W. Kirr University of Illinois	Computational Number Theory  Chair: C. Weatherby Wilfrid Laurier University	Data Analytics for System Optimization  Chair: W. Feng Trent University	Delay Differential Equations as Mathematical Models of Real World Phenomena  Chair: A.F. Ivanov Pennsylvania State University	
10:00-10:20	<i>Fractal Modelling of Hydrocarbon Bearing Rocks using Iterative Function Systems</i>  <b>Kamal</b> Indian Institute of Technology Roorkee	<i>Semilinear Hyperbolic Partial Differential Equations in Curved Spacetimes</i>  <b>A. Galstyan</b> University of Texas-Pan American	<i>Some Primality Tests that Eluded Lucas</i>  <b>H. Williams</b> University of Calgary	<i>Can we do a better job in ranking then BM25?</i>  <b>S. Wang</b> York University	<i>Effect of treatment on the global dynamics of delayed pathological angiogenesis models</i>  <b>E. Braverman</b> University of Calgary	
10:20-10:40	<i>Wavelet-Neural-Fuzzy Conjunction (WNFC) Model for Long Term Prediction of River Quality Water</i>  <b>K. Parmar</b> Punjab Technical University, Jalandhar	<i>Bifurcations and stability of standing waves in the nonlinear Schrodinger equation on the tadpole graph</i>  <b>D. Pelinovsky</b> McMaster University	<i>Simple linear relations for conjugate algebraic numbers</i>  <b>J. Jankauskas</b> University of Waterloo	<i>Viral information propagation</i>  <b>J. McVittle</b> University of Toronto	<i>Phase models and clustering in networks of oscillators with delayed, all-to-all coupling</i>  <b>Z. Wang</b> University of Waterloo	
10:40-11:00	<i>Multi Objective Optimization for determining the Optimal Designs of river levees against the urban flood</i>  <b>M. Rezoug</b> École Spéciale des Travaux Publics Paris	<i>On the global Cauchy problem for non-linear Schrödinger equation with magnetic potential</i>  <b>N. Boussaid</b> Université de Franche-Comté	<i>Binary sequences with merit factors greater than 6.34</i>  <b>S. Choi</b> Simon Fraser University	<i>Analysis and detection of coalition attacks for online advertising</i>  <b>Q. Zhang</b> Trent University	<i>An SEI Model with Age-of-Infection and Immigration</i>  <b>C. McCluskey</b> Wilfrid Laurier University	
11:00-11:20	<i>Influence of the Coriolis force on internal waves in Lake Simcoe</i>  <b>B. Flood</b> University of Toronto	<i>Integral transform approach to solving Klein-Gordon equation with variable coefficients</i>  <b>K. Jagdian</b> University of Texas-Pan American	<i>Sums of Digits in <math>q</math>-ary Expansions</i>  <b>J.C. Saunders</b> University of Waterloo	<i>An advanced data analytic tool: Okapl system and its easy adaption</i>  <b>S. Zhu</b> York University	<i>Oscillation and driving mechanism in models of West Nile virus with time delay</i>  <b>H. Zhu</b> York University	
11:20-11:40	<i>Persistent Homology for Analyzing Environmental Lake Monitoring Data</i>  <b>B. Fraser</b> Nipissing University	<i>Expansion of a wedge of non-ideal gas into vacuum.</i>  <b>M. Zafar</b> Indian Institute of Technology Bombay	<i>Radial asymptotics and algebraic independence in Mahler's method</i>  <b>M. Coons</b> University of Newcastle	<i>Denoising-autoEncoder with modified Elliot function and a sparsity term</i>  <b>S. Burhani</b> Indian Institute of Technology Bombay	<i>Modelling virus dynamics with both virus-to-cell infection and cell-to-cell transmission by a DDE system</i>  <b>X. Zou</b> University of Western Ontario	
11:40-12:00	<i>Stochastic Modeling and Performance Analysis for Electric Vehicle Charging Stations</i>  <b>H-T. Ha</b> Gachon University	<i>A Leap-frog Discontinuous Galerkin Scheme for Solving 2D Wave Propagation in Anisotropic Materials</i>  <b>M. Khaksar Ghalati</b> University of Coimbra	<i>Higher Mahler measure of some <math>n</math>-variable polynomial families</i>  <b>M. Lalín</b> Université de Montréal	<i>Weighted integrative AICs criterion to perform model selection</i>  <b>Y. Xu</b> University of Waterloo	<i>Distributed delays in a model of chemotherapy-induced myelosuppression</i>  <b>J. Bélair</b> Université de Montréal	

# Friday, June 12: Afternoon

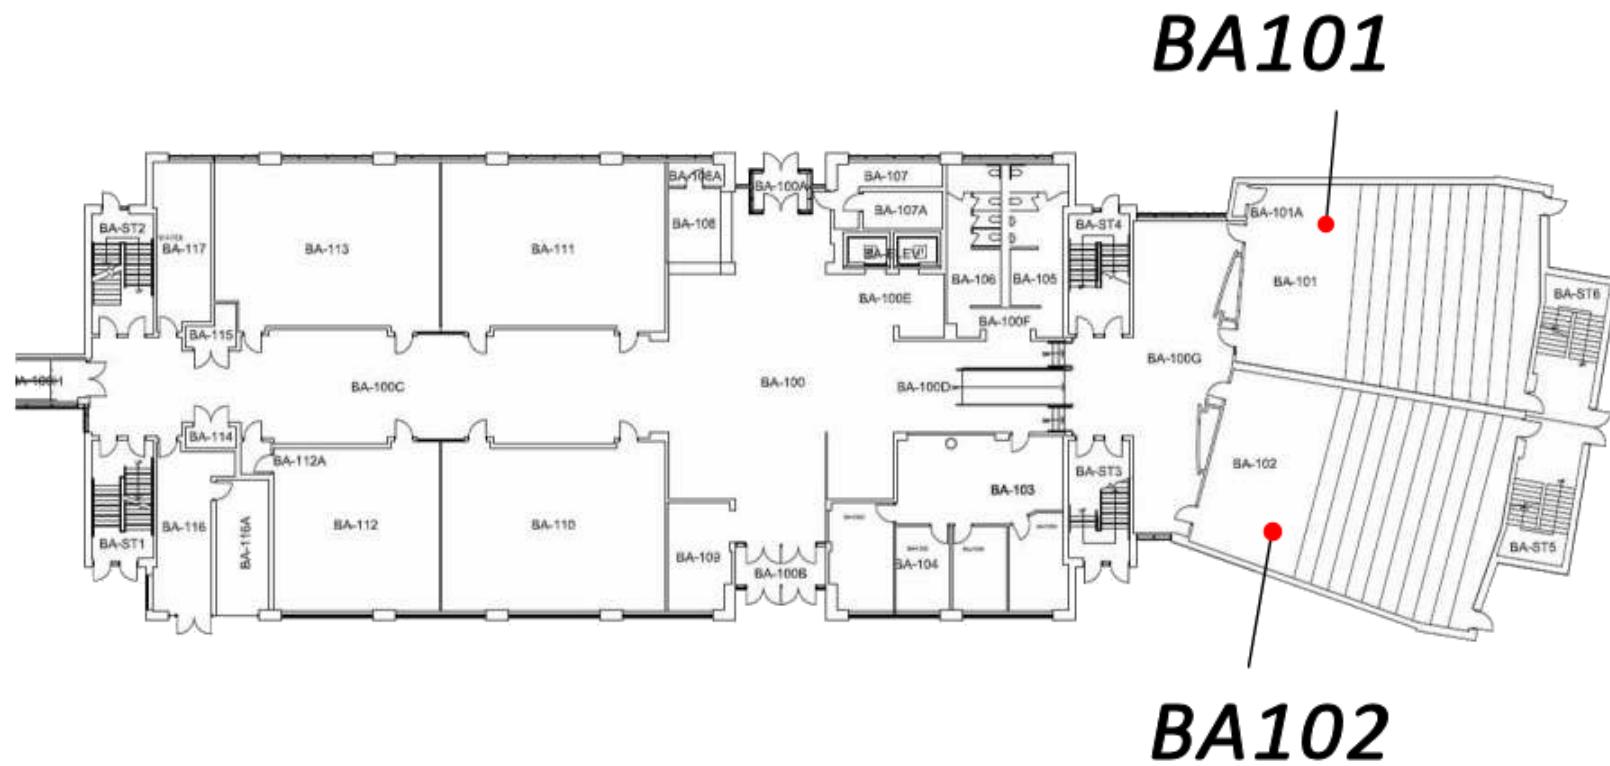

Time	Room	BA101	BA102	BA305	BA306
		<b>CS-MODELING #1</b> Partial Differential and Integral Equations in Mathematical Modeling Chair: TBA Affiliation	<b>CS-FINANCE #2</b> Financial Mathematics and Computation Chair: TBA Affiliation	<b>SS-AAIP #2</b> Inverse Problems Chair: K. Levere University of Guelph	<b>CS-SSMBP #2</b> Simulations in Soft Matter and Molecular Bio-Physics Chair: B-Y. Ha University of Waterloo
15:00-15:20		<i>Regularization results for ill-posed problems in Banach space</i> <b>M. Fury</b> Pennsylvania State University (Abington)	<i>Series Approximations for Value-At-Risks and Expected Shortfalls of Financial Delta-Gamma Methods</i> <b>H-T. Ha</b> Gachon University	<i>Parameter estimation for discrete-time models through goal programming with application to economics and management</i> <b>D. La Torre</b> University of Milan	<i>How Does A Protein Unknot? – Statistical Physics of DNA Disentangling by Topoisomerases</i> <b>H.S. Chan</b> University of Toronto
15:20-15:40		<i>Non-singular formulation of boundary integral equations in physics and engineering</i> <b>D. Chan</b> University of Melbourne	<i>Structure and Dynamics of Global Financial Network After Financial Crisis of 2008</i> <b>S. Kumar</b> University of Delhi	<i>Collage-based Approach to Inverse Problems for Elliptic PDEs on Perforated Domains</i> <b>H. Kunze</b> University of Guelph	<i>A thermodynamic study of Amyloid-beta fibrils using computer simulations</i> <b>C. Dias</b> New Jersey Institute of Technology
15:40-16:00		<i>Boundary Integral Equation Method in the Mathematical Theory of Double Porosity Materials</i> <b>M. Svanadze</b> Ilia State University	<i>A Two Stage Multi-Period Stochastic Linear Model for Bank Asset and Liability Management</i> <b>M. Mahootchi</b> Amirkabir University of Technology	<i>Modelling an Aquaponic Ecosystem using Ordinary Differential Equations</i> <b>C. Bobak</b> University of Guelph	<i>Coarse-Grained computer simulations of Alzheimers beta-amyloid peptides, using the Mercedes-Benz Hydrogen Bond Potential</i> <b>A. Linhananta</b> Lakehead University
16:00-16:20		<i>Compressibility Coefficients in Nonlinear Transport Models in Unconventional Gas Reservoirs</i> <b>I. Ali</b> King Fahd University of Petroleum & Minerals	<i>Time series modelling with non-parametric autocopula</i> <b>I. Asadzadeh</b> University of Calgary	<i>Normalization of Eigenvectors and Certain Properties of Parameter Matrices Associated with the Inverse Problem for Vibrating Systems</i> <b>M. El-Gebeily</b> King Fahd University of Petroleum & Minerals	<i>Simulated force spectroscopy of superoxide dismutase (SOD1) protein</i> <b>M. Habibi</b> University of British Columbia
16:20-16:40			<i>First passage time of skip-free Markov chains with application to ruin theory</i> <b>M. Choi</b> Cornell University		
16:40-17:00			<i>Numerical Solution of Backward SDEs: Regression Lattice Algorithm</i> <b>K.K. Gnameho</b> Maastricht University		

# Friday, June 12: Afternoon

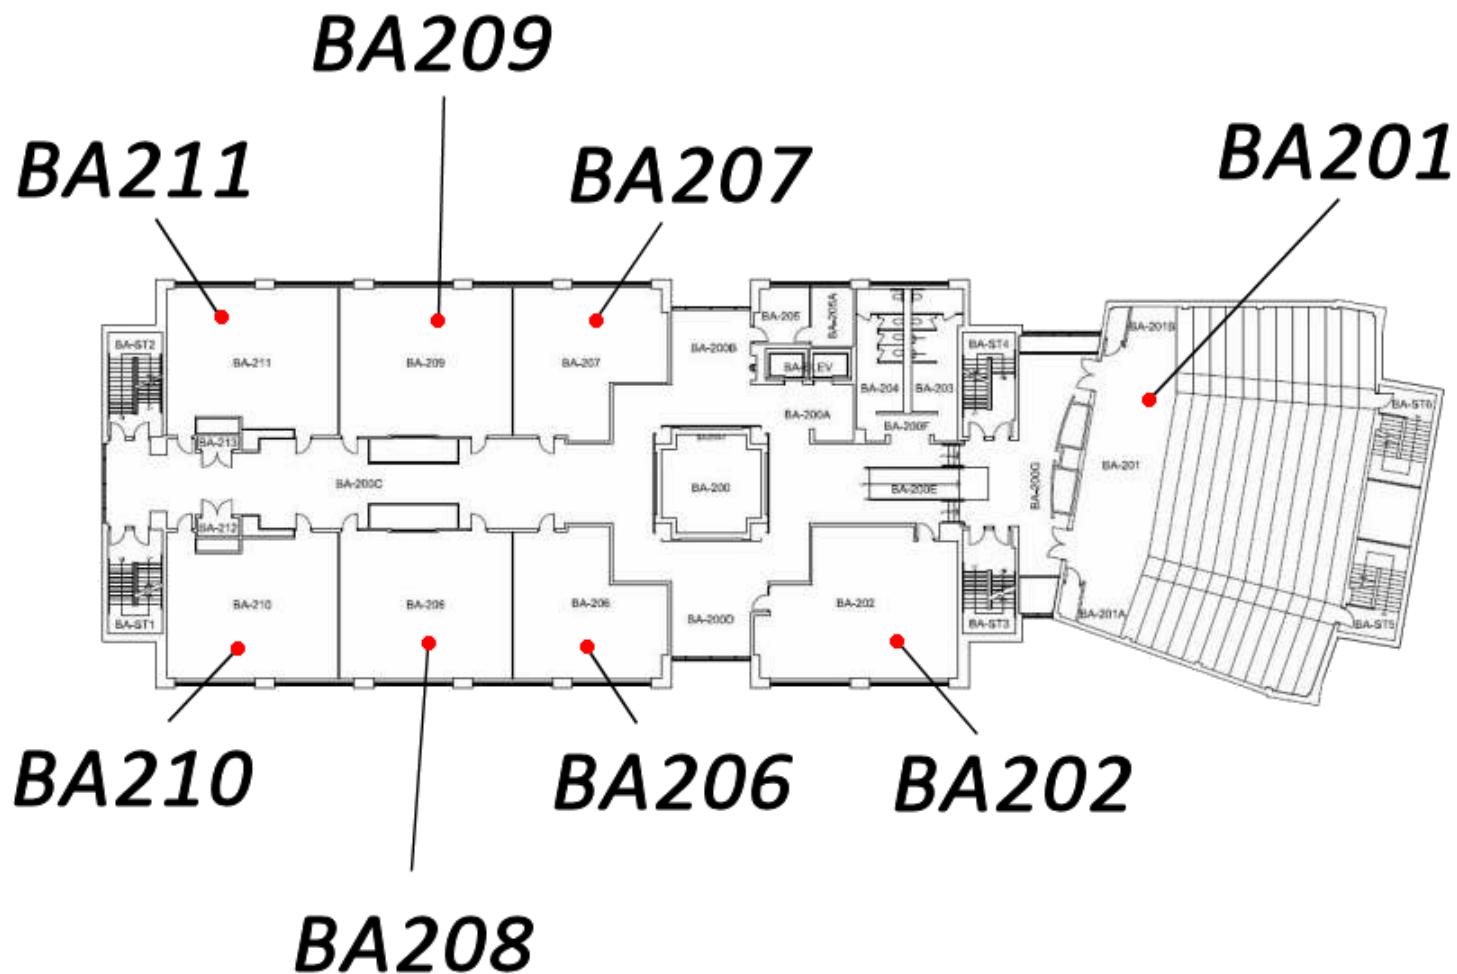

Time	Room	BA202	BA208	BA209	BA210	BA211
	MS2Discovery Institute Meeting			SS-CNT #4 Computational Number Theory  Chair: K. Hare University of Waterloo		SS-DDEMM #3 Delay Differential Equations as Mathematical Models of Real World Phenomena  Chair: TBA Affiliation
15:00-15:20				<i>Computing periodic points for Hénon maps over number fields</i>  <a href="#">P. Ingram</a> Colorado State University		<i>Placeholder; may note be needed</i>
15:20-15:40				<i>Ring-LWE Cryptography for the Number Theorist</i>  <a href="#">K. Strange</a> University of Colorado Boulder		
15:40-16:00				<i>Looking for the Best ABC triple</i>  <a href="#">S. Yazdani</a> Google Inc & University of Waterloo		
16:00-16:20				<i>The explicit formula and zeros of L-functions</i>  <a href="#">M. Rubinstein</a> University of Waterloo		
16:20-16:40				<i>Common Subexpression Algorithms for Space-Complexity Reduction of Gaussian Normal Basis Multiplication</i>  <a href="#">D. Jao</a> University of Waterloo		
16:40-17:00
